- j. Mechanical draftsmanship. It is divided into two phases: one covers freehand drawing of specific models or objects in order to master perspective; and the other covers mechanical drawing and methods of blueprint production of circuits, electrical installations, radio equipment, et cetera. This subject is completed in the initial six months of the course.
- k. Technology of materiel. It embraces all types of equipment and materiel used in the construction of airplanes, and care and protection of same.
- 1. Mathematics. The subject covers elementary algebra and plane geometry. This subject is likewise completed in the initial six months of the course.
- Physics. This subject is equal to that taught in high schools and is likewise an introductory subject, completed in the early part of the course.

50X1-HUM

- 2. Repair work done in the workshop of the Academy or in other words, of the air squadron attached to the training school, is of a minor nature, and largely consists of replacement of valves, recasting of small cylinders, and replacement of batteries Major repairs are done elsewhere.
- 3. Planes ready to take off or land at a field ask the control tower for prior clearance by radio.
